

WorkBridge: Organizational Social Network

A unified workplace collaboration platform by Maor Sapo, Roy Har Zion, and Shai Yona.

WorkBridge simplifies communication and builds stronger communities.

What is WorkBridge?

Centralized Platform

WorkBridge simplifies organizational communication, collaboration, and community-building in one place.

Key Features

- Organizational Feed for announcements
- Private & Group Chats with history
- Team Spaces for professional and social groups
- Seamless Meeting Integration with Google Calendar and Zoom

It integrates existing tools, providing an intuitive, unified interface.

The Problem: Fragmented Communication

Scattered Tools

- WhatsApp for quick chats
- Slack or Email for teams
- Google Calendar & Zoom for meetings
- Google Drive for documents

Consequences

- Frequent platform switching
- No single overview
- Disconnected people and tasks
- Difficult onboarding

This fragmentation reduces efficiency and causes disconnect within organizations.

The Solution: WorkBridge Unification

Centralized Feed

See updates across teams and the whole organization.

Structured Groups

For departments, projects, or interest-based communities.

Persistent Chat

Real-time chat with full message history.

Integrated Tools

Calendar, Zoom, and shared resources all in one place.

WorkBridge delivers less distraction, better connection, and more clarity.

What is Kubernetes?

Scalability

Automatic scaling as needed.

High Availability

Multi-pod deployments with health checks.

Resource Management

Efficient allocation for optimal performance.

Environment Management

Secure, isolated environments.

Kubernetes is an open-source system for automating deployment, scaling, and management of containerized applications. It enhances our platform's reliability.

Kubernetes and WorkBridge Microservices

WorkBridge leverages Kubernetes to manage its modular microservices architecture. This design ensures robust performance and seamless updates.

Technologies

Project Status & Next Steps

1

What's Done

- Auth flow end-to-end (FastAPI + React)
- DB schema for users & chat
- Basic React pages: login, dashboard, chat
- Initial chat endpoint + UI

2

Must-Have (Before Final)

- Full UI for messages & group management
- Organizational Feed (backend + frontend)
- Kubernetes deployment setup
- Add real-time messaging support (WebSocket)

3

Nice-to-Have

- File sharing per group
- Offline read-only mode

We have a solid foundation and clear steps for completion and future enhancements.

THANK YOU

Our Vision

Unified workplace
collaboration.

User Experience

Intuitive and efficient design.

Technical Foundation

Built to scale reliably.

We aim to transform workplace interaction. Questions?
